

A top-down view of a car's engine bay. The engine is a four-cylinder unit with a triple carburetor. A silver throttle linkage rod runs vertically from the top of the engine to the throttle body. A black throttle cable with blue and red ends is connected to the carburetor. Blue hoses are connected to the carburetor. A red box highlights the throttle linkage rod. A white box with a red 'no' symbol is placed over the throttle cable. A white box at the bottom contains text explaining the need for a left throttle lever for a triple carburetor installation. A white box with a red 'no' symbol is also present.

**Kit sold with Right
Throttle lever
(removed on the pic)**

**For a plug and play
triple Webers
installation, it needs
left Throttle lever**
